

## Using Humanoid Robots to Improve Social Behaviors of Children with Autism

Are you worried about the social skills of your children?

---

This 6-month study examines the use of humanoid robots at improving social skills such as eye gaze attention and facial expressions of children with ASD.

**Children are eligible if they:**

- Are between 7-17 years
- Have diagnosed with High Functioning Autism or Pervasive Developmental Disorder-Not Otherwise Specified (PDD-NOS)

Participants will do the following experiments:

1. Play with Robot
2. Facial Expressions Imitation
3. Joint Attention
4. Communicative Skill Training
